

DC-UPS

NCPA1301G30001

1 Short description

The DC buffer module of the **C-TEC 1225 P** series is equipped with integrated ultracapacitors for accumulating energy. During normal operation this capacitor is charged by an internal charger which is supplied by an external, regulated DC power supply. If the DC supply is interrupted, energy of the ultracapacitors is released in a unregulated process (12 to 10 V DC). The load is supplied by the buffermodul until the voltage is ≤ 10 V. The buffering time depends on the state of charge of the capacitor and discharging current. As further function the **C-TEC 1215 P** can provide more current for a certain time.

The DC-UPS shows the following features:

- Maintenance-free due to durable ultra capacitors
- Microcontroller based charging and discharging of the ultracapacitors
- Inputvoltage-signal via potential-free contact and LED
- Short overload possible
- Vibration secured wiring via spring loaded plugs
- Wide working temperature range -40°C up to 60°C
