1 Brief description

The DC UPS of the **C-TEC** series has inside of the housing ultracaps as energy storage. In mains operation, the ultracaps will be charged by an external controlled DC power supply. In the event of interruption of DC power supply, the energy of the ultracaps will be released in a controlled way. The load will be fed until the **C-TEC** is discharged. The buffer time depends on the output current and the energy of the ultracaps.

The **C-TEC 2410** has the following properties:

- Maintenance-free due to long-life ultracapacitors
- Microcontroller-based charging and discharging of the ultracapacitors
- Operating and charging status monitoring via LEDs
- Superfast charging due to active charging current control
- IPC management due to shutdown function triggered by time and output current
- Numerous customer-specific parameterisation options via USB interface
